

CSCI 491/591, Group Project Part 0

Tao Huang and James Soddy

January 26, 2016

Our group intend to work together to complete all portions of the project. We have some amount of flexibility in our plans, and we are still open to the possibility of merging with another group or taking on another member.

1 P1 and P2

During the exploration phase, Tao and James will work together to select several options for our project. Tao's statistics background and knowledge of data will help us to find data sets which will make for an interesting project. James will also help with finding and discussing data sets. Both group members will help assemble ideas and information, but James will have primary responsibility for completing the write-up.

2 P3

James and Tao will work together to select the visualization which will best represent our data. Both will be responsible for processing the data, but Tao will have primary responsibility for generating the visualizations.

3 P4

For our group's presentation, Tao and James will both participate in planning and presenting the data. Tao's focus will likely be more on numbers and graphs while James will focus more on the explanation.

4 P5 - P7

Through the final sections, we will frequently discuss our data and keep notes on what we have done and what we need. Tao will have primary responsibility for providing interpretation of our data analysis results, while James will be accumulating our work and putting it into a form that will be suitable for turning in. Tao will take the lead in our group presentation in class, while James will have final responsibility for completing our written deliverable.

5 Conclusion

We feel that our very different skill sets will work well together so that we can complete an interesting project. We are looking forward to collaborating again.
